

ABOUT WORKABILITY NETWORK

In 2002, WorkAbility Network was founded in Ohio to assist local independent therapy practitioners in providing world class industrial therapy services to injured workers and employers. Our mission is to reduce costs and lost productivity related to unnecessary work restrictions or disability.

WORKABILITY MODEL OF LOSS CONTROL

The Workability Model of Loss Control is based on three fundamental principles:

- It costs less to prevent work-related injuries than to treat them.
- Early intervention by returning injured workers to the job as soon as safely possible lowers claims costs and improves productivity and bottom line profitability.
- Medical management and job placement decisions should be supported by objective measures of the employee's workabilities in comparison to job demands.

In 2007, WorkAbility Network expanded to meet needs of therapy providers, workers, and employers throughout North America.

WORKABILITY INNOVATIONS

- The [WorkAbility eJobProfile](#) System offers a web-based job analysis platform for global user access, worker-job match searches, and interface with job safety analysis.
- The Workability Evaluation System is completely [MOBILE](#) and [ADAPTABLE](#) for providing a comprehensive range of assessments at multiple clinic or work locations.

CUSTOMER BENEFITS:

- Reduce unnecessary disability costs
- Improve safe job performance
- [Responsive](#) providers are trained to meet specific company needs
- [Centralized](#) referral coordination
- [Understandable](#), fully-automated job and worker evaluation reports

WORK IS THERAPY!

INJURY PREVENTION

WorkAbility Job Analysis

Functional analysis of job tasks to evaluate injury risk factors, establish physical qualifications for safe job performance, and develop transitional work options.

WorkAbility Fitness Screen

An objective, post-offer screen of musculoskeletal health and workabilities to promote job safety and productivity.

WorkReady Training Program

Job-specific training emphasizing correct body mechanics, proper warm-up, and self-management of symptoms, to reduce the frequency and severity of work-related injuries.

EARLY INTERVENTION

WorkAbility Assessment

Post-injury fitness-for-duty evaluation to objectively determine an employee's physical work restrictions and readiness to return to full duty.

Transitional Work Therapy

Therapeutic activities at the work-site to accommodate and progress an injured worker with medical restrictions back to productive duty in a targeted job.

Physical/Occupational Therapy

Clinic-based industrial therapy emphasizing return to work goals through active therapy, physical reconditioning, and job simulation.

MEDICAL MANAGEMENT

Functional Capacity Evaluation

Comprehensive evaluation of physical disability to determine permanent restrictions and facilitate job search or settlement.

Ergo Accommodation Study

Ergonomic analysis of how a worker's restrictions impact safe job performance, with recommendations for temporary or permanent job modifications.

WorkAbility IME/File Review

A multidisciplinary evaluation and/or file review by therapy, medical, or vocational experts to address such issues as MMI, impairment, extent of disability, need for further healthcare, impact on employability, or eligibility for disability benefits.
